DEDICATED / FRAME RELAY / BROADBAND CONNECTIONS:

A DEDICATED line or connection, essentially a point-to-point transmission pathway, is a telecommunications path between two points that is available 24 hours a day for use by a designated user (individual or company). It is not shared in common among multiple users as dial-up lines are. A dedicated line can be a physical path owned by the user or rented from a telephone company, in which case it is called a leased line. FRAME RELAY puts data in a variable-size unit called a frame and leaves any necessary error correction (retransmission of data) up to the end-points, which speeds up overall data transmission. For most services, the network provides a permanent virtual circuit, which means that the customer sees a continuous, dedicated connection without having to pay for a full-time leased line, while the service provider figures out the route each frame travels to its destination and can charge based on usage. BROADBAND is defined as any connection of 128K or greater. *See: Internet Connectivity, 56K Connections, Cable Modem Connections, Dedicated / Frame Relay / Broadband Connections, T-1 Connections, T-3 / Fiber Optic Connections, xDSL Connections, Wireless WAN Connections*
